KAMALESH B

SOFTWARE ENGINEER | +91 759 838 3120 | Kamalesh5112000@gmail.com | LinkedIn | GitHub | Leetcode

Profile Summary

- Results-driven Software Engineer with nearly 4 years of experience in full-stack development, mobile application engineering, and scalable data solutions. Experienced in delivering high-performance, maintainable, and production-ready systems in fast-paced environments. Strong expertise in backend architecture, cloud integrations, and cross-functional collaboration to deliver secure and scalable applications.

Education

Bachelor of Technology - Computer Science and Engineering — CGPA: 7.56
Pondicherry Engineering College, Pondicherry — 2018 - 2022

Technical Skills

Programming Languages: Python, JavaScript, Go
Frameworks & Libraries: ReactJS, React Native, Next.js, Vite.js, Node.js, Express.js, Django, FastAPI, Socket.IO, Tailwind, Redis, Kafka
Databases & Cloud: MySQL, SQL Server, MongoDB, AWS, GCP
Tools & Platforms: Docker, Power BI, GitHub, Postman, Asana, Regex, REST APIs, Hugging Face, LLM

Experience

Software Development Engineer | Privasapien — July 2025 - Present

- Architected a privacy-first middleware gateway in Go (Echo), orchestrating secure communication across 5+ microservices and integrating enterprise-grade LLM providers.
- Designed multi-tenant backend systems using MongoDB and RBAC, reducing manual access-control effort by ~40% through policy-driven authorization.
- Automated compliance workflows using Kafka and Redis for Data Subject Rights (DSR) processing, improving operational turnaround time through audit logging and real-time notifications.
- Strengthened platform security through JWT authentication, rate limiting, and MinIO (S3-compatible storage), ensuring production-ready compliance and resilience.
- **Tech Stack:** React.js(Vite), Go (Golang), Echo, MongoDB, Kafka, Redis, MinIO (S3), Docker, JWT/OAuth2

Software Development Engineer | Drishtee — August 2024 - July 2025

- Engineered scalable hybrid mobile applications using React Native and Node.js, enabling faster feature delivery and improving cross-platform user experience.
- Designed an AI-powered test automation platform leveraging Hugging Face LLMs to capture user interactions and generate natural-language test cases, reducing manual QA effort by ~50%.
- Integrated Microsoft Dynamics 365 Business Central to streamline expense tracking and improve financial reporting accuracy.
- Optimized backend services and deployment workflows using FastAPI and MongoDB, reducing API response latency by ~25% while improving system reliability.
- **Tech Stack:** React Native, React.js, Node.js, FastAPI, MongoDB, Puppeteer, Hugging Face LLM, Socket.IO

Software Development Engineer | Tutorpoint — March 2023 - July 2024

- Delivered scalable full-stack applications using React, Express, MongoDB, and GCP, supporting business-critical workflows.
- Enhanced REST APIs and database performance, improving application efficiency by 20%.
- Boosted website traffic by 35% through SEO optimization, analytics, and heatmap-driven improvements.
- Maintained reliable cloud deployment pipelines on GCP, ensuring 99.9% uptime.
- **Tech Stack:** React.js, Next.js, Express.js, MongoDB, GCP, RESTful APIs, SEO, Git, Docker.

Data Engineer | HP Inc. — February 2022 - July 2022

- Designed interactive Power BI dashboards to visualize enterprise-scale datasets and support strategic business decisions.
- Refactored Spark queries into Python, improving processing efficiency and maintainability of analytics workflows.
- Established a custom Python library integrating SSIS tools, automating ETL operations and reducing repetitive engineering effort.
- Partnered on Azure-based data pipeline optimization initiatives to improve operational efficiency.
- **Tech Stack:** Python, Power BI, SSIS, SQL Server, Azure

Projects

AI Test Automation Engine

- Engineered an AI-powered automation platform using WebComponents and JavaScript-based event interception for feature-level interaction tracking.
- Leveraged Hugging Face LLMs to transform recorded workflows into human-readable test cases, reducing QA documentation effort by ~50%.
- Implemented scalable backend orchestration with FastAPI and Socket.IO for seamless real-time synchronization.
- Tech Stack: React, Python, FastAPI, Socket.IO, MongoDB, Hugging Face, LLMs

Group Chat Application

- Built a real-time messaging platform supporting group chats, member management, and one-to-one communication using Socket.IO.
- Designed scalable APIs and MongoDB-backed persistence for reliable message synchronization and chat history.
- Crafted responsive frontend components to improve usability and messaging experience.
- Tech Stack: React, JavaScript, Node.js, Express.js, Socket.IO, MongoDB

Job Seeker

- Implemented a job aggregation platform using Django and Python to scrape and consolidate listings from multiple job sources.
- Structured backend workflows for efficient data extraction, storage, and presentation of opportunities.
- Automated crawling pipelines with Scrapy, reducing manual job-search effort and improving accessibility.
- Tech Stack: Django, Python, SQLite, Scrapy

Achievements

- Winner – AIC-PECF Innovation Challenge: Developed Angadi, a farmer-to-consumer marketplace platform aimed at reducing supply-chain gaps and improving direct accessibility for local farmers; solution was officially launched by the Chief Minister.
- Solved 250+ problems on LeetCode with a 50+ day coding streak, strengthening problem-solving, algorithmic thinking, and data-structure fundamentals.

Certifications

MERN Stack | Sharpener September 2022 - February 2023

- Completed an intensive full-stack engineering program focused on scalable web application development using React, Node.js, Express.js, MySQL, and MongoDB.
- Designed production-ready applications emphasizing REST APIs, database architecture, and frontend-backend integration.
- Strengthened expertise in cloud deployment, software reliability, and scalable system design.
